

SUGGESTION FOR USE:

Students work in pairs.

Each pair will need a coin or counter, a whiteboard marker and a laminated copy of this number card.

Students take it in turns to put their coin or counter on the black circle and push or flick it onto one of the number squares. If they can say the correct word for that square, they can write their initial on the square with the marker.

If they land on the spider, they have to erase their initials on one of the squares they have gained.

If they land on the star, they get another turn.

The winner is the first student to mark his initial on all the squares.
